COMFORT FOAMS

A better choice for the environment . . .

Reducing Air Emissions with VPF Technology

Joyce is committed to environmentally responsible manufacturing and has made significant progress in the reduction of hazardous air emissions and Volatile Organic Compounds (VOCs) through the introduction of Variable Pressure Foam (VPF) Technology.

Variable Pressure Foam Technology sets the standard in environmentally responsible foam manufacturing. In fact, VPF is the most environmentally friendly process for the manufacture of polyurethane foams in the world.

VPF enables Joyce to develop and produce unique, value-enhancing products for their

customers, while providing higher yields from raw materials than traditional foaming methods.

This combination of superior product performance and reduced air emissions provides an important technological edge for Joyce Foam Products. Compared to standard foam production methods, VPF technology exceeds the EPA requirements for emission controls.

The most beneficial advantage of the VPF manufacturing process is that the physical properties of the polyurethane foam can be controlled through the use of air pressure, giving a better quality product.

A Better Choice for the Environment

Joyce Foam Products has been certified under the GECA FFFv2.1i - 2010 Furniture, Fittings and Foam standard and awarded the Australian Good Environmental Choice Ecolabel, Licence No. JOY-2016.

The Good Environmental Choice label is only awarded to products which have the highest level of environmental preference, quality and fitness for purpose.

This represents the leading environmentally preferable options in the marketplace.

All comfort grades produced by Joyce Foam Products are certified through GECA.

For further information on licensed products, refer to the GECA website www.geca.org.au

Quiltec™

Quiltec is designed for the bedding market as a fibre replacement foam that virtually eliminates body impressions.

Quiltec increases airflow and offers better moisture dissipation through the mattress. Using the latest VPF technology, Joyce Foam Products can now offer this revolutionary product for mattresses.

The softest and most environmentally friendly foam for the bedding and furniture market . . . so soft you will think you're floating on air.

High resilience foam grades with exceptional bounce-back even after years of use. The best quality for furniture and bedding has improved through the use of VPF technology, creating higher quality foam and a cleaner, greener product.

Joyce Foam Products offers a lifetime guarantee in domestic furniture and bedding, and up to 10 years in commercial applications. Most grades are certified the highest fire retardant rating.

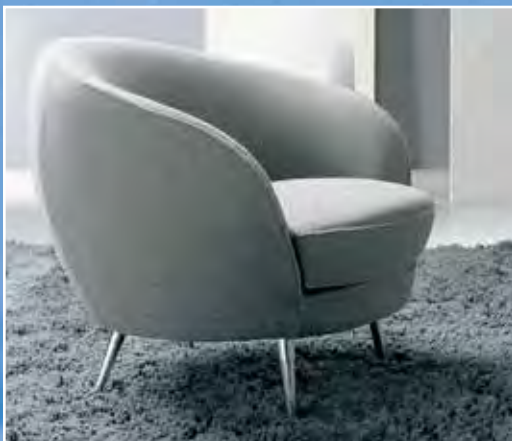

Ultimate COMFORT

A unique type of foam that offers the features of memory foam combined with the functionality of high resilience foam. VPF technology has allowed Joyce to create a new comfort feel that wraps around your shape whilst allowing body heat to dissipate through the mattress.

Hygroflex-Indulge has the pressure relieving properties of memory foam without the heat. It is extremely open and feels cool to touch, and will stay quite cool while sleeping, helping to regulate the microclimate of the mattress.

Hygroflex-Indulge comes with a 15 year domestic warranty.

Hygroflex™ INDULGE

Premium Comfort is a heavy duty foam range for quality support in cushioning and is guaranteed to maintain comfort levels for years.

Now manufactured using VPF technology, giving you better quality foam and a cleaner, greener product.

Premium Comfort foams come with a 10 year warranty.

Premium COMFORT

Indulgence

COMFORT

A slow recovery foam that offers an initial comfort feel with deep down support. Ideal as a top layer in bedding and furniture. Indulgence Comfort gives a luxurious feel to any piece of furniture. Made with VPF technology to produce a higher quality, greener foam. Indulgence Comfort has a 15 year warranty in domestic furniture and bedding.

An exclusive range of memory foams that offer the market the largest range of comfort feels available. Ideal as a top layer in furniture and bedding products, the special shape conforming properties of Viscoform add an ultra-luxurious comfort feel to any product.

Made with VPF technology, giving you higher quality foam and a cleaner, greener product.

Viscoform comes with a 15 year warranty in domestic furniture and bedding.

Viscoform

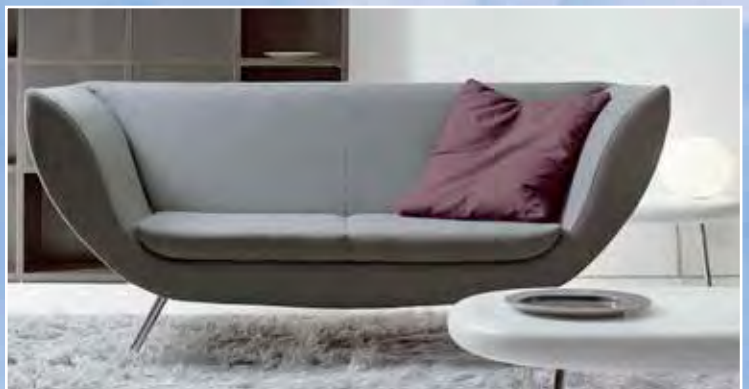

MEMORY FORM

Gelform

TM

A unique range of viscoelastic foams infused with either liquid or particle gel to create cooling properties that complement the slow recovery foam. The combination of both shape conforming and cooling properties make this the perfect choice for furniture and bedding products.

Gelform comes with a 15 year warranty in domestic furniture and bedding.

Active Comfort is a general purpose foam range which is ideal for normal duty, including upholstery and overlays.

Now made with VPF technology, giving you better quality foam and a cleaner, greener product.

Active Comfort foams come with a 5 year warranty.

Active

COMFORT

Living

COMFORT

Living Comfort is an introductory level foam range made for applications that require a minimum resilience and is ideal for non-load bearing applications.

These grades come with a standard 1 year warranty.

Econofoam is a value range of foams that offer both comfort and resilience at a lower density than previously available. Thanks to Variable Pressure Foam Technology, Joyce's range has increased to include lower and higher density comfort foams with equivalent performance to previous standard comfort foam grades.

From density 10 through to density 23, this range offers excellent value whilst ensuring the same levels of comfort and performance. Econofoam is manufactured using the world's most environmentally conscious production methods.

Econofoam™

Dricell™

A range of open cell reticulated foams ideal for outdoor seating and foam applications that are exposed to weather and wet conditions. Unique to Joyce Foam Products, this range includes a number of different comfort feels and offers up to a 3 year warranty in seating applications.

Now made with VPF technology, these foams are more durable and greener than previously available.

Joyce Foam Products infuses all comfort grades with Comprishield during the foam manufacturing process. Comprishield provides protection for consumers by eliminating dust mites, mould and bacteria, significantly reducing one of the major causes of allergies and asthma in the home.
